

Sean Smith

seansmitth1926@gmail.com | github.com/ssmitty | linkedin.com/in/sean-matthew-smith

Skills

Languages + Tools: Python, TypeScript, JavaScript, SQL, HTML/CSS, C/C++, Docker

Technologies and Libraries: React, AWS, PostgreSQL, DynamoDB, Lambda, EC2, dbt, Prefect, Streamlit, OpenCV, OutSystems O11, Git, Scikit-learn, Flask, OpenAI API, Pandas, NumPy

Concepts: REST APIs, Data Modeling, Multithreading, Machine Learning, Databases, LLMs + RAG

Certifications

Associate Developer O11, OutSystems

June 2026

- Validated proficiency building and deploying low-code apps on OutSystems O11.

Experience

Wodify

June 2026 – Present

Software Engineer Intern

Philadelphia, PA

- Delivered production backend functionality for a fitness platform serving 1M+ athletes across thousands of gyms using OutSystems O11, SQL, and 4-Layer Canvas architecture.
- Designed the data model, service boundaries, and asynchronous processing logic for a Milestones and Achievements system, enabling automated evaluation across multiple achievement types and member events.
- Reduced client milestone processing time by 60 percent by loading milestone records from the database once and using an in-memory lookup table instead of repeated per-client queries.

D2.ai

Dec 2025 – Feb 2026

Software Engineer Intern

Remote

- Reduced CODA shape-analysis runtime by 83 percent by implementing stratified sampling that preserved representative analytical coverage across large cyber-insurance datasets.

Prep U

Aug 2025 – Nov 2025

Data Engineer Intern

Remote

- Enabled near-real-time AI assessment feedback by building an event-driven DynamoDB Streams-to-AWS Lambda pipeline that generated and stored guidance after each submission.

D2.ai

June 2025 – July 2025

Data Science Intern

Remote

- Achieved 97.4 percent precision, 97.3 percent recall, and 95.5 percent F1 across 10,000 test cases by developing a Python company-lookup API for NASDAQ, NYSE, and SEC filing data.
- Deployed the API on AWS EC2 behind an Application Load Balancer and supported automated insurance quote generation by modeling 33 company-rating features.

Projects

Surf Session Warehouse | *Python, SQL, Pandas, SQLAlchemy, Docker Compose, GitHub*

GitHub

- Achieved 77.4 percent agreement between forecasted surfability classifications and 159 NOAA/NDBC buoy observations across 3 surf spots by building an automated evaluation harness.
- Transformed 1,008 raw forecast rows into daily condition facts, spot-performance summaries, forecast-to-session quality views, and pipeline-health reports using Python, PostgreSQL, dbt, and Prefect.

Wave Vision | *Python, OpenCV, NumPy, OpenAI API, GitHub*

GitHub

- Achieved 76 percent wave-event detection precision across 75 manually labeled events by developing an OpenCV pipeline for fixed-camera surf footage.

The Pink Path | *React, TypeScript, OpenAI API, GitHub*

GitHub

- Generated personalized career-path recommendations from multiple-choice and open-response inputs by integrating a React and TypeScript assessment application with the OpenAI API.
- Built a multi-step assessment flow with client-side state management, dynamic results, progress tracking, PDF export, and responsive light and dark themes.

Education

University of Delaware

Newark, DE

B.S. Computer Science and B.S. Mathematics — Expected May 2027

M.S. Applied Mathematics — Expected May 2028

GPA: 3.91
