

Sean Smith

seansmitth1926@gmail.com | GitHub | LinkedIn

Skills

Python, SQL, PostgreSQL, dbt, Streamlit, Prefect, AWS, DynamoDB, Lambda, OutSystems O11, JavaScript, TypeScript, C/C++, REST APIs, Data Modeling, Model Selection, Model Evaluation

Certifications

Associate Developer O11, OutSystems June 2026
Reactive web development, data modeling, server-side logic, and application lifecycle management

Experience

Software Engineer Intern, Wodify – Philadelphia, PA June 2026 – Present

- Engineered production-shipped backend functionality for Wodify, a fitness software platform serving 1M+ athletes across thousands of gyms, using OutSystems O11, SQL, and 4-Layer Canvas architecture.
- Architected the data model, service boundaries, and asynchronous progress logic for a Milestones & Achievements system supporting all achievement types.
- Automated client milestone awards when members sign in, book appointments, pass anniversary dates, or extend weekly streaks using injection-safe SQL and production workflow filters.

Software Engineer Intern, D2.ai – Remote Dec 2025 – Feb 2026

- Optimized cyber insurance clustering workflows by sampling large datasets while preserving analytical coverage, reducing shape-analysis bottlenecks in Python model-evaluation pipelines.

Data Engineer Intern, Prep U – Remote Aug 2025 – Nov 2025

- Automated near-real-time assessment feedback with a DynamoDB Streams-to-AWS Lambda pipeline that generated AI-powered guidance upon submission.

Data Science Intern, D2.ai – Remote June 2025 – July 2025

- Achieved 97.4% precision, 97.3% recall, and 95.5% F1 across 10,000 test cases by developing a Python company-lookup API for NASDAQ, NYSE, and SEC filing data.
- Deployed the lookup API on AWS EC2 behind a load balancer and modeled 33 rating features in a mock insurance quote simulator.

Projects

Surf Session Warehouse – GitHub | Live App

- Built an end-to-end surf analytics warehouse using Python, PostgreSQL, dbt, Prefect, and Streamlit to ingest Open-Meteo forecast data and model spot-level surf conditions.
- Modeled 1,008 raw forecast rows into daily condition facts, spot-performance summaries, forecast-to-session quality views, and pipeline-health reporting.

Wave Vision – GitHub | Live App

- Built a Streamlit and OpenCV surf-video analysis application that calibrates fixed-camera footage, detects wave events, and estimates wave height, velocity, set intervals, and confidence.

Education

University of Delaware	Newark, DE
B.S. Computer Science and B.S. Mathematics	Expected May 2027
M.S. Applied Mathematics	Expected May 2028
