Skills

Python, OutSystems, SQL, AWS, JavaScript, C, C++, Model Selection, Web REST, Data Modeling, Model Evaluation

Certifications

Associate Developer O11, OutSystems

June 2026

- Reactive web development, data modeling, server-side logic, and application lifecycle management

Experience

Software Engineer Intern, Wodify – Philadelphia, Hybrid

June 2026 – Present

- Designed the relational data model for a Milestones & Achievements feature in OutSystems O11, following 4-Layer Canvas architecture to improve module separation across a multi-module codebase.
- Built upsert server and service actions for milestone group management, applying correct module visibility patterns to enable clean consumption across orchestrator and business logic modules.
- Wrote injection-safe dynamic SQL queries to support real-time filtering by achievement type, status, and client visibility.
- Built a bootstrap process to backfill milestone progress for all existing gym members across Attendance, Weekly Streaks, and Gym Anniversary groups.

Software Engineer Intern, D2.ai – Remote

Dec 2025 – Feb 2026

- Reduced shape analysis bottleneck by sampling datasets while preserving coverage, improving processing efficiency for cyber insurance clustering models.
- Optimized and validated a clustering algorithm on cyber insurance data, increasing data reliability across the analysis pipeline.

Data Engineer Intern, Prep U – Remote

Aug 2025 – Nov 2025

- Decreased assessment feedback latency to near real-time by integrating OpenAI to auto-generate personalized guidance on student submission.
- Improved query performance and maintainability by refactoring DynamoDB schemas and modularizing backend services.
- Automated the feedback pipeline end-to-end by building a DynamoDB Stream to Lambda workflow that triggers OpenAI generation on assessment completion.

Data Science Intern, D2.ai – Remote

June 2025 – July 2025

- Achieved 97.4% precision, 97.3% recall, and 95.5% F1 across 10,000 test cases by developing and deploying a public company lookup API for NASDAQ/NYSE and SEC filings.
- Ensured high availability and scalability by deploying the API on AWS EC2 with a load balancer.
- Quantified the impact of 33 rating features on yearly pricing by building a mock insurance quote simulator.

Projects

Wave Tracker

Check it out June 2026

- Built a Streamlit + OpenCV surf video analysis demo that calibrates a fixed camera view, detects wave events, and estimates wave height, velocity, and confidence from uploaded footage.
- Added Open-Meteo weather context and optional OpenAI-generated surf reports.

Education

University of Delaware

Aug 2023 – May 2027

B.S. Mathematics and B.S. Computer Science

University of Delaware

Aug 2027 – May 2027

M.S. Applied Mathematics
