Skills

Python, SQL, PostgreSQL, dbt, Streamlit, Prefect, AWS, DynamoDB, Lambda, OutSystems O11, JavaScript, TypeScript, C/C++, REST APIs, Data Modeling, Model Selection, Model Evaluation

Certifications

Associate Developer O11, OutSystems

June 2026

Reactive web development, data modeling, server-side logic, and application lifecycle management

Experience

Software Engineer Intern, Wodify – Philadelphia, Hybrid

June 2026 – Present

- Engineered production-shipped backend functionality for Wodify, a fitness software platform serving 1M+ athletes across thousands of gyms, using OutSystems O11, SQL, and 4-Layer Canvas architecture.
- Architected the data model, service boundaries, and async progress logic for a Milestones & Achievements system supporting all achievement types.
- Automated client milestone awards when members sign in, book appointments, pass anniversary dates, or extend weekly streaks, using injection-safe SQL and production workflow filters.

Software Engineer Intern, D2.ai – Remote

Dec 2025 – Feb 2026

- Optimized cyber insurance clustering workflows by sampling large datasets while preserving analytical coverage, reducing shape analysis bottlenecks in Python model evaluation pipelines.

Data Engineer Intern, Prep U – Remote

Aug 2025 – Nov 2025

- Automated near real-time assessment feedback with a DynamoDB Stream to AWS Lambda pipeline that triggers AI-generated guidance on submission.

Data Science Intern, D2.ai – Remote

June 2025 – July 2025

- Achieved 97.4% precision, 97.3% recall, and 95.5% F1 across 10,000 test cases by developing a Python company lookup API for NASDAQ/NYSE and SEC filing data.
- Deployed the lookup API on AWS EC2 with a load balancer and modeled 33 rating features in a mock insurance quote simulator.

Projects

Surf Session Warehouse – GitHub | Live App

- Built an end-to-end surf analytics warehouse using Python, PostgreSQL, dbt, Prefect, and Streamlit to ingest Open-Meteo forecast data and model spot-level surf conditions.
- Modeled 1,008 raw forecast rows into daily condition facts, spot performance summaries, forecast-to-session quality views, and pipeline health reporting.

Wave Vision – GitHub | Live App

- Built a Streamlit and OpenCV surf video analysis app that calibrates fixed-camera footage, detects wave events, and estimates wave height, velocity, set intervals, and confidence.

Education

University of Delaware

Aug 2023 – May 2027

B.S. Computer Science; B.S. Mathematics; M.S. Applied Mathematics
